

Project Proposal for Ph.D.

Project Details (The research problem must clearly indicate the need for an interdisciplinary approach)

Project Title	Examining decision making task in zebrafish model system to identify cognitive, behavioural and molecular correlates of neurological dysfunctions in humans. Broad area: Cognitive, Affective, Behavioural Neuroscience, Animal Cognition, Comparative Psychology
Project Summary (Minimum 500 and maximum 2000 characters)	There is a wide gap between animal and human studies which limits our understanding of brain and neurological dysfunction that occur due to neurodegeneration, neural injury, and metabolic disorders. Identifying the cognitive and behavioural metrics in zebrafish model system so that they are equitable and generalizable to human clinical conditions can improve translational neurosciences. Rodent models have more established experimental tasks that provide cognitive, behavioural and locomotor measures but zebrafish offers a genetically tractable, high-throughput system for investigating neural dysfunction and hence it's cognitive and behavioural characteristics can be defined to help understand brain pathologies and neurological dysfunctions. In this project, we will first examine cognitive and behavioural data and do experimental validation in zebrafish followed by molecular characterization for studying molecular underpinnings of locomotor and cognitive impairments in neurological conditions that symbolizes cognitive and motor deficits in humans. Research Objectives: Aim 1: Utilize open-source zebrafish datasets to identify risk and reward-related behaviours to establish species-specific behavioural metrics in zebrafish for understanding brain injury and neurodegeneration and cognitive decline. Aim 2: Induce mild traumatic injury/metabolic stress in zebrafish using mechanical or chemical methods. Record behavioural deviations using fluorescence tracking setups and video-based scoring. Apply computational movement analysis tools to quantify cognitive and behavioural impairments in zebrafish. Aim 3: Investigate neuroinflammatory/oxidative stress/signalling markers post-injury/metabolic stress using qPCR and immunohistochemistry for understanding atypical behaviour and post-injury/post-stress behavioural alterations. Examine vascular changes and glial activation using transgenic zebrafish lines (ex: fli1: eGFP for vascular integrity, GFAP staining for glial response etc) for understanding atypical cognitive and behaviour measures and post-injury/post-stress cognitive and behavioural alterations in zebra fish. Perform RNA sequencing or targeted gene expression analysis to identify transcriptional changes in key pathways associated with neuronal dysfunction and pathological cognitive and behavioural measures.

Ph.D. Supervisors
(Supervisor 1 and Supervisor 2 cannot be from the same department of IITD)

Role	Name of Faculty	Date of Superannuation (DD/MM/YYYY)	Academic Unit in IITD/Institute/University	Email ID (Official) & Contact Number
Supervisor 1	Varsha Singh		Humanities and Social Sciences	vsingh@iitd.ac.in
Supervisor 2	Shilpi Minocha		Kusuma School of Biological Sciences	sminocha@bioschool.iitd.ac.in

Project requirements (Student qualifications, experience required, etc)
*The candidate will be shortlisted based on common shortlisting criteria decided by ScRC (SIRe)

- Masters in Life Sciences, Neuroscience, Biology; Zoology, Anthropology can also apply
- MBBS, MTech in Biomed Engineering
- UGC JRF, CSRI JRF, or any other fellowship for pursuing PhD.

- These are desirable: (a) experience working with an animal system, especially zebrafish (b) knowledge of cell culture and basic molecular biology techniques (c) strong interest in comparative psychology, biological psychology, experimental psychology (d) knowledge of research design and statistics (preference for candidates who have prior experience in publications from their masters or undergraduate thesis, and working in a multidisciplinary team).

Source of fellowship/funding and project number

(CSIR/UGC/DBT/ICMR/ICAR/NEET-PG/DST-INSPIRE/IRD/FITT Project details, if any)

CSIR/UGC/ICMR/NEET/INSPIRE

Role of Faculty Members involved:

Supervisor-1

Dr. Varsha Singh

Supervisor-2

Dr. Shilpi Minocha

Note :-

1. Approval from the respective DRC/CRC/ScRC of your Department/Centre/School will be required for using the "Institute Fellowship (Category-wise)" for selecting the students in SRe.
2. Declaration:- Faculty members, please ensure that you have at least 3 years of service left before superannuation along with adequate sitting space & lab facilities for the SRe student.
3. PI/s are also encouraged to submit joint proposals with AIIMS, NII, JNU and institutes with which IITD has an existing MoU. If the Co-PI (Supervisor 2) is from outside IITD, kindly share his/her detailed CV.
4. If a research scholar is to be considered for selection under the project fellowship, then the project should have a minimum of two-year duration remaining.
5. A candidate applying with a valid JRF/INSPIRE/any national level fellowships should have at least two-year validity from the date of joining of the Ph.D program.
6. The third supervisor name (if required) can be added only after the formation of Student Research Committee (SRC) subject to a strong recommendation of SRC and subsequent approval from the competent authority.
7. If Institute fellowship is being sought then DRC approval of the parent department of Supervisor 1 is required at the time of selection.
